

PRESS RELEASE

Oasis Smart SIM launches “Eos Multi IMSI”, an advanced USIM connectivity management solution for IoT and global roaming

Oasis announces its advanced SIM-based “Eos Multi IMSI” solution enabling an automatic switch of network subscription, providing an optimized roaming solution and industrial-grade activation platform for connection of IoT devices

Paris-France, February 15th, 2016

Oasis Smart SIM, the expert in SIM and USIM operating systems, activation and connectivity solutions for consumer devices and IoT, enhances its “Eos” range of products and services for connection and activation, with “Eos multi IMSI” solution.

The “Eos Multi IMSI” enables to switch network by automatically changing, deleting and updating IMSIs depending on rules and principles defined by the Service Provider. “EOS multi IMSI” is composed of:

- An application implemented beside Helios OS, Oasis advanced USIM operating system, allowing a manual, network-controlled or automatic network switch based on rules and principles stored and managed by the business intelligence part of the embedded application,
- A solution installed in the network or running in the cloud in charge of dynamically updating the application content and the business rules of the embedded application.

With this latest addition, the SIM-agnostic Eos portfolio brings mobile network operators and service providers, a complete set of tools enabling them to remotely manage subscriptions for the IoT, connected objects or consumers.

Olivier Leroux, Oasis’ CEO said: “Eos Multi IMSI” was already used by many of our customers including a major group in Russia. It has been recently enhanced to fit the request of a pan-EU MVNO. It illustrates Oasis efforts and commitment to provide secure and configurable access network to subscribers and devices. “Eos Multi IMSI” will be integrated into Eos Subscription Management, the Oasis’ USIM configuration solution for IoT and soon customer devices. We are proud of our leading role in IoT and device management.”

Oasis recently announced its eSIM offer “Helios Embedded,” a version of its Helios SIM operating system series specially designed to fit the specificities of new eSIM market trends and consumer needs. It provides a secure and configurable network access to billions of connected devices fitted with Secure Elements (SE), both removable and soldered. Oasis has also recently set up a partnership with Spirent Communications plc, the leading provider of device intelligence solutions, under which both companies will offer a unique software solution for OEMs to embed into their products for a seamless cellular service activation. The combination of “Eos multi IMSI” and “Helios Embedded” ensures Oasis is in a leading position in the IoT, M2M, connected objects as well as mobile subscriber markets.

Oasis Smart SIM will be present at the Mobile World Congress, in Barcelona, Spain from February 22nd to February 25th, 2016. Do come and visit us in Hall 2 at booth 2 D 13 MR.

About Oasis Smart SIM

Oasis Smart SIM provides both end-to-end and customized services to enable the deployment of global USIM technology connectivity and management. Oasis' mission is to embed USIM technology in all connected devices and provide secure services to manage their activation and connectivity. This value proposition is ensured by Oasis offering: a full set of services for embedded and reprogrammable SIM, along with solutions for activation, connectivity and subscription management. Oasis contributes in shaping the globally connected world by combining leading edge USIM technology and disruptive business models in a migrated focus from products and solutions to software and services.
