

PRESS RELEASE

For Immediate Release

OASIS WILL EXHIBIT THE END-TO-END EMBEDDED DEVICE CONNECTIVITY SOLUTION AT IoT WORLD

Oasis and its key IoT partners will showcase their unique embedded connectivity and subscription management solution for the M2M, IoT and Consumer Devices at IoT World in Santa Clara on 10th-12th May

Paris – May 4th 2016 - Oasis Smart SIM, the expert in embedded USIM operating systems, cellular service & connectivity activation solutions for M2M, Internet of Things (IoT) and consumer devices, announces its participation to the IoT World Event, to demonstrate its unique embedded connectivity solution and discuss the disruptive business opportunities offered by its ecosystem.

The IoT World Event will take place at the Santa Clara Convention Center where more than 10,000 IoT actors (stakeholders and investors) will present their contributions and significant influence, and promote new development in the IoT sector. Oasis will be attending the event sharing the booth #926 with its key IoT ecosystem partners from Spirent, the leading provider of device intelligence solutions.

The Internet of Things is a game changer for the mobile communication industry and the embedded SIM technology facilitates business industries and all connected service providers' activities. Along with our key partners, we have been able to adjust to this new market trend by developing an eSIM solution for all connected devices and offering a unique software solution for OEMs and IoT service providers.

"Combined with Spirent's device management solution, we are able to provide a seamless cellular service activation that can enable all IoT players from OEMs, M2M or IoT Service providers to achieve their complete IoT opportunities, and we are delighted to take advantage of the IoT World Event to showcase our solutions and share our vision and business perspective with other players of the ecosystem" said Olivier Leroux, Oasis' CEO.

About Oasis Smart SIM

Oasis Smart SIM provides both end-to-end and customized services to enable the deployment of global USIM technology connectivity and management. Oasis' mission is to embed USIM technology in all connected devices and provide secure services to manage their activation and connectivity. This value proposition is ensured by Oasis offering: a full set of services for embedded and reprogrammable SIM, along with solutions for activation, connectivity and subscription management. Oasis contributes in shaping the globally connected world by combining leading edge USIM technology and disruptive business models in a migrated focus from products and solutions to software and services.
